EDR & MDR

Endpoint Detection & Response (EDR) + 24/7 Managed Detection & Response (MDR)

Fully managed and fully customisable prevention, detection and response solution that runs in-line on the endpoint and follows your custom playbooks and business processes. Unlike traditional anti-virus software that only prevents known threats based on a signature-based detection methodology, C8 Secure prevents known and unknown threats leveraging machine learning, behavioural analysis, external threat intelligence and signature-based methodologies for comprehensive protection.

Malware and Ransomware Prevention

Machine learning-powered malware prevention for known or unknown malware, with 99% block rate and zero false positives. Behaviour-based ransomware prevention blocks attacks before full disk encryption.

Phishing Prevention

Industry's first machine-learning based phishing prevention for Microsoft Office documents. The platform blocks malicious macros pre-execution, achieving greater than 99% efficacy.

Exploit and Fileless Attack Prevention

Full protection against memory-based attacks with patent-pending process injection prevention. A unique malware scoring system prevents malicious module loads, DLL injection, and shell code injection, preventing adversary evasion and fileless attacks.

MITRE ATT&CK Alignment

Bring consistency to incident information and allow for faster alert triage, assessment and decision making with more than one-hundred pre-built ATT&CK rules.

Managed Detection & Response

Highly trained security experts work as an extension of your team to provide 24x7 prevention, detection and response services to protect your users, systems and data.

- **Prevent:** Analyse potential security gaps and adjust countermeasures
- **Detect:** Continuous monitoring and analysis of alerts and anomalous behaviour
- **Respond**: Neutralise threats and manage the incident following customer defined playbooks

Always-On Protection:
Single agent with always-on protection for off-network or off-line devices

Comprehensive OS Support:
Protects Windows, Mac, Linux and Solaris Operating Systems

One-Click Containment:
Terminate a process or quarantine a device

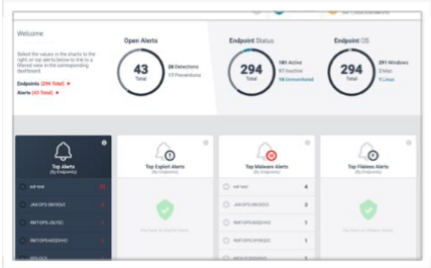
EDR & MDR

Prevention, Detection and Response

Intuitive Dashboards

Streamline all administration and agent management, enhance IT operations visibility, optimise security incident response, and advanced threat hunting capabilities. Real-time detection and response workflows surface suspicious artifacts across millions of records.

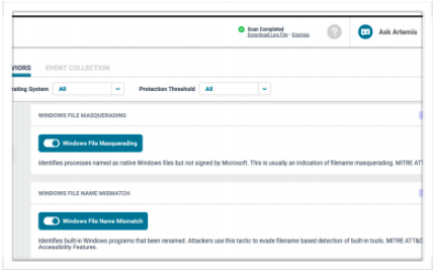


Attack Visualisation

Visually render the complete incident timeline with real-time activity analysis of your critical data. One-click containment empowers your team to investigate incidents at enterprise scale with zero business disruption.

Precision Response

Isolate an endpoint in the event that it's compromised. The response action will lock down the endpoint and only allow it to talk to the Endgame server. Create separate policies and apply them to designated endpoints as appropriate.



Third-Party Validation

PCI-DSS and HIPPA Compliant. Pre and post-execution validation from AV Comparatives, NSS Labs, VirusTotal, Forrester, SE Labs, and MITRE. Participation in MITRE's program for public testing, submitting to MITRE researchers for independent testing against targeted attacks.
